“Surgical Neurology” is a well known international journal of neurosurgery and neuroscience which is widely distributed in the world. The journal is indexed in SCI, BioSIS and Index Medicus. In the past, many good papers from Taiwan have been accepted and published in the journal, reflecting our country’s high distinction in the field of science. Through continuous effort, we finally obtained Surgical Neurology’s approval to allow Taiwan neuroscience specialists the authority to prepare for the publication of the supplement of Surgical Neurology. There are more than ten societies of neuroscience in Taiwan, and approximately one hundred papers are reported every year from each society. Of those papers, many are in good quality and should be encouraged to be completed in full text and then submitted to this journal. We have organized an editorial board from Taiwan Neuroscience Alliance, which consists of representatives from each society and each medical center. The editorial board will be in charge of reviewing and revising the manuscripts to improve their content and in order to achieve the requisite quality standard of Surgical Neurology. Initially, we plan to edit two supplements per year. Each supplement will be consisted of ten to fifteen papers. We would then have twenty to thirty papers published in the SCI journal. Through this endeavor we will be able to improve the academic level of our country, thereby gaining further recognition of our academic status worldwide.
